

Own Account RealityCheck

Report CND-OA-TEST-001 · Generated 2026-06-11 · Confidence: Limited

CANDOR REALITYCHECK	Own Account RealityCheck · Lantern Scan Complete
ACCOUNT SURVIVAL SCORE	39 / 100
OBSERVED DRAWDOWN BAND	High
KILLER BEHAVIOR	Long losing streaks
CONFIDENCE	Limited
REPORT ID	CND-OA-TEST-001

How to read the score

0–40: high breakage pressure observed in this uploaded history. **40–65:** borderline resilience — risk patterns are present but not extreme. **65–100:** stronger historical resilience, subject to data confidence. The score describes the uploaded history only — not a forecast, not advice, not a guarantee.

Executive summary

Account Survival Score: 39 / 100 · **Observed drawdown band:** High · **Confidence:** Limited
Statistical risk diagnostics only. Estimated from uploaded history; not a forecast. Not trading advice.

Account inputs

Starting balance: USD 10,000 · Leverage: 30x · Stop-out: 50%

Data quality

Trades: 63 · Trading days: 28 · Profitable days: 15 · Outliers: 2
Less than 30 trading days.

Drawdown risk bands

Threshold	Sensitivity band	Breached in history?
10%	Severe	Yes
50%	Medium	No

Bands are coarse on purpose to avoid false precision. Estimated from uploaded history; not a forecast.

Killer behavior

Most dangerous behavior: Long losing streaks
Test note

Longest losing streak: 5 days · Sensitivity: High · Profit concentration: Medium · Risk drift: Rising

Margin pressure

Observed equity floor (worst-case in sample): **69.8%** of starting balance. Margin pressure band: **High**.
Headroom vs 50% stop-out: **Medium**.

Estimated from uploaded history; not a forecast.

What to do with this report

This report is a snapshot of the uploaded history and the ruleset version shown above. If your risk settings, trade behavior, instrument mix, or a public ruleset changes, rerun the RealityCheck with updated data.

Common reasons to rerun:

- You changed position sizing
- You added 30+ new trades
- You switched instruments
- A public challenge rule changed
- Your drawdown pattern changed

Next steps: Rerun after new data · Compare another mode · Submit your outcome later.

Testing different risk settings? A 3-report bundle lets you compare scenarios without starting from scratch.

Mini glossary

Trailing drawdown: A drawdown limit that can move as account equity rises.

EOD drawdown: A drawdown calculation based on end-of-day equity rather than every intraday tick.

Daily loss limit: The maximum loss allowed within a trading day under a ruleset.

Retry loop: The repeated cost of buying or restarting challenges after failure.

Fee burn: The estimated cost pressure created by low pass odds and repeated attempts.

Risk DNA: Behavioral risk patterns detected from your uploaded history.

Killer rule: The rule most often associated with failure in simulation.

Killer behavior: The trading behavior most associated with drawdown pressure in your uploaded history.

Confidence: A data-quality label based on trade count, trading days, and available fields.

Not financial advice. Test.

We do not tell you what to buy, sell, trade, enter, avoid, or attempt. We show statistical estimates and risk patterns based on the data you uploaded.
